

## **THEFT & VANDALISM PROTECTION**

**Peak:** Simple to install and easy to use.

A safe and effective deterrent from vandalism or theft. The "Peak" unit is designed to fit over the latch of a fire protection cabinet. Simply pulling down on the Peak Unit exposes the standard door latch. Constructed of high quality moulded plastic that will not rust or corrode.

Available in white with red lettering.

**CCC-OO1:** Similar to the Peak Unit, the CCC-001 fits over a standard cabinet latch. Breaking the special break glass with the provided hammer, exposes the cabinet door latch. Constructed of cast aluminum with a red enamel finish.

**CMS-01:** Monitor switch with mounting bracket. Designed to sound an alarm or signal a panel in the event the cabinet door is opened. Constructed of 18 gauge metal with a Nickel Chrome plating for added corrosion resistance. Electrical monitor switches can be installed on all National Fire Equipment's Cabinets.

(Alarm, Alarm Panel and Electrical Wiring Not Included)

**CYL-87100:** Our standard cylinder lock can be provided on all NFE's fire protection cabinets. Recommended for installation at the factory but is also available for site installation.

(It is not recommended to lock fire protection cabinets without the means of emergency access)

**BGL-87127:** Break Glass Lock Assembly can be provided on all NFE's fire protection cabinets. Provided with 2mm break glass on full metal doors or with  $^{3}/_{16}$ " (5mm) scored glass on full glass fronts. Emergency access is gained by shattering the glass and pulling the inside lever. Recommended for installation at the factory but is also available for site installation.

Comes complete with instruction decals.

## **Important Note:** Check with local authorities prior to installing any locking device on fire protection cabinets.
