

National Fire Equipment Ltd.

MODEL FB64 FIRE BLANKET CABINET

This 3-ply fiberglass blanket comes in a red cabinet complete with instructions labels and pull straps for quick release. For smothering and extinguishing fires in Schools, Hospitals, Homes and Kitchens and is a one-time use only.

The fiberglass degrades at a temperature of 550°C. The standard is tested to require that the blanket puts out the flames on a cooking oil pan and the flames cannot re-ignite within 15 minutes. The design of the fire blankets has a sacrificial inner film that allows the heat to escape and allow the oil to cool to prevent re-ignition.
