CLASS D

The Amerex "soft flow" extension applicator is particularly suited for fighting Class D fires. It allows the operator to stand away from the extreme heat and toxic fumes caused by burning material. The easily controlled, even discharge provides a non-dispersing application of the agent. The extension applicator may be quickly detached to provide a straight stream of chemical where greater range is required.

MODELS
B570
C571

MODEL B570 contains a special blended Sodium Chloride-based dry powder extinguishing agent. Heat from the fire causes it to cake and form a crust excluding air and dissipating heat from burning metal. Metal fires involving magnesium, sodium, potassium, and sodium-potassium alloys can be successfully extinguished with this extinguisher. There is data showing that zirconium, uranium, titanium, and powdered aluminum fires can be controlled and extinguished with this unique extinguisher.

Extinguishing Capacity

Magnesium Chips: 4 ft.2 and/or 6 lbs. of metal
 Sodium or Potassium Spill: 5 ft.2 and/or 5 lbs. of metal
 Sodium or Potassium Spill Depth Over "": 3 ft.2 and or 6 lbs. of metal
 Sodium Potassium Alloy Spill: 3 ft.2 and/or 2 lbs. of metal

Available in 150-lb. Wheeled Extinguisher

MODEL C571 contains a copper extinguishing agent specially developed by the U.S. Navy for fighting lithium and lithium alloy fires. The copper compound smothers the fire and provides an excellent heat sink for dissipating heat. Copper powder has been found to be superior to all other known fire extinguishing agents for lithium metal fires. Not recommended for lithium-ion battery fires.

Extinguishing Capacity

4 ft.2 and/or 5 lbs. of lithium Available in 250-lb. Wheeled Extinguisher
