

# National Fire Equipment Ltd.

## A95 IDENTIFICATION SHEET

There are several manufactures of surface mounted fire department connections available in Canada. National Fire carries two different models. A95 and A95-PR. Both these fire department connections have different sized swivel rings and ball bearings. This is important to know when replacing the swivel rings on a particular fire department connection body. Time should be taken to identify the correct fire department connection so that the correct swivels are sent to the project for replacement.

Below are photos of each fire department connection for identification purposes. When ordering the replacement swivels, please provide the model number (A95 or A95-PR) so that we may send the correct replacement swivels and bearings.

Please contact our customer service team with questions or any assistance choosing the correct replacement parts.

### Model A95-PR

A89-PR swivels  
Ball bearing diameter 4.763mm

### Model A95

A89 swivels  
Ball bearing diameter 4.74mm
