## 231 & 264 Valve Control

Model 231 (Square Plate)

Model 264 (Round Plate)

National Fire's model 231 and 264 are valve control assemblies designed for non-rising stem gate valves. They allow for operation of the gate valve from outside of a wall when the valve is located behind the wall. All fittings and adapters are made from cast brass and are also available in a chrome finish. This assembly works in connection with our model NRS gate valve, as well as our wall hydrant connections; model 294 (surface wye style) or model 230 (recessed style). Please see the diagram on the following page to see how these components work together to create a complete wall hydrant.
