

RIGID POLY BACKPACK TANK

The rugged, high-performance poly backpack fire tank is the next-generation replacement for outdated galvanized steel models. Unlike other plastic tanks, this unit is constructed from thick-walled polyethylene, making it virtually indestructible while remaining lightweight and comfortable for extended use.

Key Features & Benefits:

- Durability - Built from heavy-duty polyethylene, it resists cracks, dents, and corrosion, ensuring long-lasting reliability.
- Comfort & Stability - The ergonomics, non-slosh design molds to the user's back for a secure, balanced fit, reducing strain during extended operations.
- Ambidextrous Operation - Designed for both right and left handed users.
- Lightweight & Efficient - With a 5-gallon (U.S.) capacity and weight of only 9 lbs. (empty), it provides optimal water storage without unnecessary bulk.

The modern solution for wildfire suppression, replacing outdated materials with advanced durability, comfort, and functionality.

Part number: PBPRFT5G

Note: Some assembly required. Shipped without hose attached .
