

Sprinkler Cabinets

General Description

TYCO Sprinkler Cabinets are constructed of metal enclosures with hinged covers designed to provide on-site storage of an emergency supply of sprinklers and a sprinkler wrench. A sprinkler cabinet typical application is shown in Figure 6.

The NATIONAL FIRE PROTECTION ASSOCIATION (NFPA) standard, NFPA 13, requires a representative number of each type of sprinkler used in a sprinkler system to be stored in a cabinet on-site to allow for immediate removal and replacement of sprinklers that may have operated or become damaged.

Sprinkler cabinets are manufactured of heavy gauge steel with knock-outs to accommodate NPT threaded sprinklers and are painted in red enamel.

NOTICE

The TYCO Product described herein must be installed and maintained in compliance with this document, as well as with the applicable standards of the NFPA, in addition to the standards of any authorities having jurisdiction, such as FM Global. Failure to do so may impair the performance of these devices.

The owner is responsible for maintaining their fire protection system and devices in proper operating condition. Contact the installing contractor or product manufacturer with any questions.

In all cases, the appropriate NFPA or FM Global installation standard, or other applicable standard, must be referenced to ensure applicability and to obtain complete installation guidelines. The general guidelines in this data sheet are not intended to provide complete installation criteria.

IMPORTANT

Refer to Technical Data Sheet TFP2300 for warnings pertaining to regulatory and health information.

6 ESFR Sprinkler Cabinet	.3.3	lb	(1,36)	kg)
6 ESFR-34 Sprinkler Cabinet	12.0	lb	(5,44)	kg)

Storage Criteria See Table B

Installation

TYCO Sprinkler Cabinets are designed with two 3/16 in. (4,7 mm) diameter holes for wall mounting or direct attachment to the system riser with a strap-type hanger. For information about the sprinkler cabinet dimensions, see Figures 1 to 5.

The sprinkler cabinet should be installed at, or near the system control valve and must be stocked with an adequate supply of spare sprinklers and a sprinkler wrench.

The stock of spare sprinklers should include sprinklers of each type and temperature rating from the range installed in the sprinkler system, based on the quantities in Table A. For information about the sprinkler cabinets' storage criteria, see Table B.

As required, insert a screwdriver blade from the front top of the shelf and under the near bottom part of the knockout annular ring. Press the screwdriver handle down to remove the knockout ring.

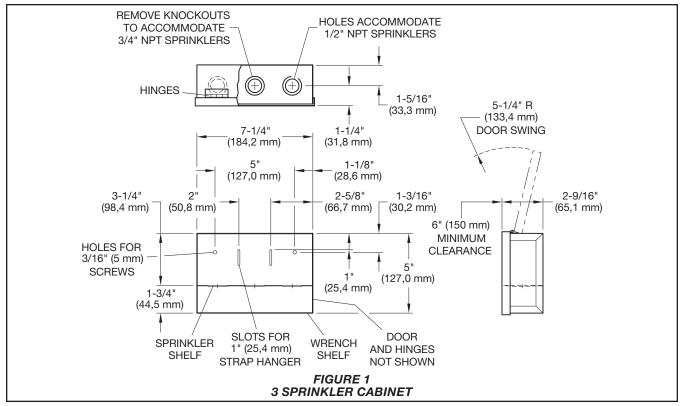

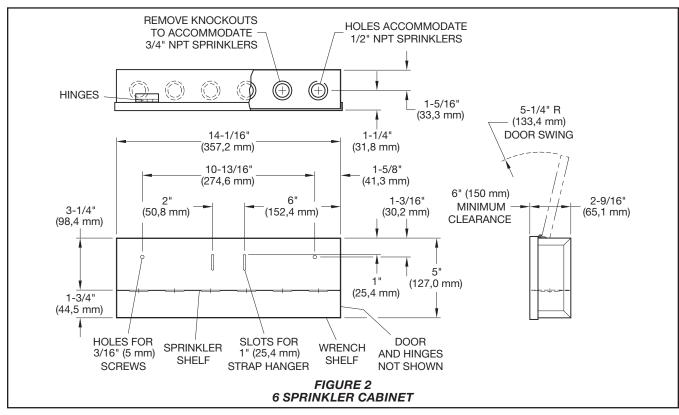

Sprinklers In System	Spare Sprinklers Required		
Under 300	6		
300 - 1000	12		
Over 1000	24

Care and Maintenance

Inspect the sprinkler cabinet, wrench, and stock of spare sprinklers at least on a quarterly basis. Check the following items:

- Location of the sprinkler cabinet is readily accessible, and not exposed to a corrosive atmosphere or temperatures in excess of 100°F (38°C).
- Spare sprinklers stock includes an adequate number of each type with the required temperature rating.
- Sprinkler stock is in good condition.
- A sprinkler wrench of the appropriate type is included in the sprinkler cabinet.

Limited Warranty
